

BURNER #flushyourmeds Scott A. Barry ;  
By Scott A. Barry / Scott A Barry / Scott Barry ... ;

Many LOLCOWS know of this trick, the more more apps you have,

the gmail you have linked or email, the sim are the only backdoors

on the phone when you link it to an IMEI Number not new at all ... ;

Sure Desktops have no IMEI and track you far less than a phone, sure that is the case, then you have phones w no sim inside, Degoole with netguard and no gmail or email linked after doing a factory reset, this is how to do it if you have no money for a regular computer and only 20 bucks to spare and a PO

BOX ... ;

So if you are looking for a less obnoxious computer that does not take any space, the burner is for you, all it is is a De-Googled Android Phone that has no Gmail or Email or any identification linked to it during a factory reset to oldest

version of Android os that it shipped with, you will need to not

link any gmail or email to the device and disable any and all features

that track and log you and spy on you, you will need to remove the sims

from your LG At&t G3 and G6 Phones as Sims are linked to an IMEI Number,

and this is all you do, to communicate, use IRC web.libera.chat or Kiwi

IRC in Chromium of Brave or Tor Browser, then Install Netguard to block

all of the apps, root it to uninstall the tracking apps, F-Droid is your

repo you will use on these Burner Phones that only communicate through

IRC on Public WiFi, Andriod OS is Linux, it is only compromised when you

install tracking apps on the device, if you factory reset and do not link

any ID or Email to Said Device Google Play Store will not work and you

will need an Archive of the APK or F-Droid as the only safe repo available,

and lastly the less apps you have on a phone, the safer you are, also

appearing stupid with an Andriod phone is a wiser choice in some ways as you are the Grey man who uses a phone with no sim, no bluetooth and only one feature turned on that is WiFi then you never use email, on email on deck a temporary email, or just use your Home WiFi on it as that is safer than Public WiFi, you can even Factory Reset the phone every Time you use Public WiFi and set it up all over again so when PUB WiFi infects your phone, just do fact reset and do not link the gmail and you are set ... ; You can search temp sms number and use this in placeholder affidavits along with Business Title ("NULL") for all of your shipments to say a motel Six that you live at for the PO BOX, and most people can only ship small items so a Homeless guy would kill for a Degoogled Andriod Phone as this is what people of differences unlike you would go for, you see we are mentally ill and would go for a phone with no gmail linked to it as that is only a way for google to remotely format your phone for being naught on YT ... ; As a Security Role Player I've always been using 5150 Dexter, and Andriod is still Linux, you just have to realize, it's what apps you install not Netguard from the F-Droid Repository, also on the real Burner Phone, No Sim is used, IRC is the Only Communication over WiFi, Home WiFi if possible, and if you use Public WiFi you're kinda foolish, just do a factory reset, erase it all, d\*\*\*\*\* it all out, do not link an email or gmail, and move on with life ... ; --Scott A. Barry ... Is an Atheist Holocaust Denier Dunce Moron Idiot ... ; This is the Footer EOF of this Stupid Dumb Useless Ignorant Manuscript ... ;
